# Salgenx S6000 Salt Water Flow Battery

The Salgenx S6000 is two S3000's sharing the same command and control container with extra electrolyzer stacks. Utilizing economies of scale make this system less expensive to manufacture. The salt water redox flow battery does not use a membrane, but utilizes the immiscible liquids to separate liquid electrolytes. The key feature of the flow battery is one of the electrolytes, which is brine, or salt water. Systems can be configured by numbering up the S3000 into a RAID system up to 18 megawatts.

## End User Chart

User savings when grid mining arbitrage (buying off peak power at night and then using during the day to offset on peak power rates).

User savings when using optional thermal battery functions.

Analysis of manufacturing.

## Salgenx S6000 6 MWhr Completed Battery Pack System 48V

<b>Description: </b> 6,000 kWh Completed Battery System.

48-480V (other voltages and configurations available)

<b>Measurements: </b> Tank Containers with Command and Control Container.

-or-

Over the road tankers and Command and Control Van.

You supply water, salt, off-the-shelf counter electrolyte.

<b>Price:(1-5) </b> \$5,000,000

<b>Price: After 6 units </b> \$3,000,000

<b>Price: After 12 units </b> \$2,000,000

<b>In Stock: </b> Custom order.

<b>Order Time For More: </b> 6-12 months.

<b>Shipping: </b> To any USA lower 48 location.

<b>Order Now: </b> Shipping within 3 days of in-stock.

<b>Support: </b> Support is an additional option.
